

# Newsletter

3rd Edition, 2023

We have had a busy few months here at Paratus Clinical.

- Our team has attended a number of conferences both in Australia and overseas.
- We successfully recruited for a number of studies including a large healthy volunteer influenza vaccine study, exceeding recruitment targets.
- Paratus Clinical keeps growing, we are now 70 employees strong, which is a 50% growth in the last 2 years.

Our new Brisbane site in Herston is officially open, we hosted a successful open day on the 12th September offering CRO's, Sponsors and vendors guided tours of our new venue. The site was officially opened by our CEO, Dave Gardiner, with a celebratory cake cutting. The day was a huge success and we want to thank everyone who took the time to come along.

## Brisbane Site Open Day, 12th September

# Conference update

We are heading to the World Vaccine Congress, Europe! Our Medical Director & Principal Investigator, Dr Amber Leah and our Commercial Lead, Heenal Patel, will be attending. We would love to speak to you while we are there, please send Heenal an email to organise at [heenal.patel@paratusclinical.com](mailto:heenal.patel@paratusclinical.com)

## Attendance so far...

**World Vaccine Congress, Washington USA - April 2023**

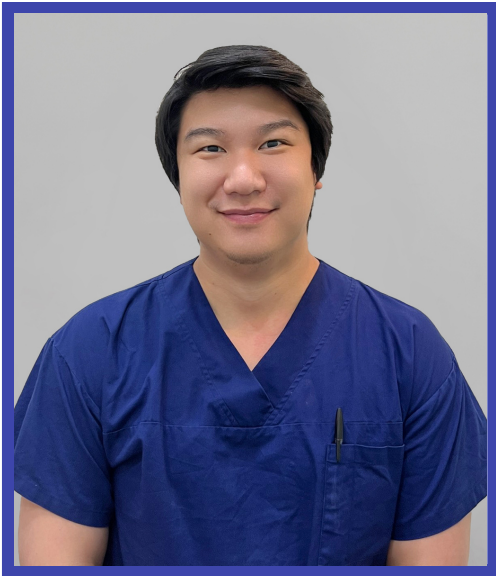

Our Chief Commercial Officer, Matthew Clacy and Medical Director, Dr Rahul Mohan attended The World Vaccine Congress in Washington earlier in the year to showcase the capabilities of Australian clinical research sites and how we can better deliver trials.

**ARCS Conference, Sydney - June 2023**

Hosting a booth at the ARCS conference in Sydney was a highlight to our year. This allowed us to network with new and existing clients as well as give our staff the opportunity to attend valuable information sessions.

**SCRS Conference, Melbourne - July 2023**

This year we attended the SCRS Conference in Melbourne having 2 speakers as well as our Quality Manager and Commercial Lead attend. We were keen to participate in the breakout sessions providing a sites perspective. We are looking forward to more ways we can collaborate with SCRS next year.

# An interview with Dr Seet

DR PI LIP SEET

Principal Investigator

Investigator

## What appealed to you about becoming a principal investigator and working in clinical research?

Working in clinical research has provided me with a greater understanding of the process required in the approval of new therapeutics in healthcare. There is a greater appreciation of the work involved to coordinate a well-organized team of health professionals with the goal of advancing the future of healthcare.

## What are the types of trials you have worked on and do you have a favourite one or memorable moment?

I have worked on a variety of clinical trials that range from an assortment of vaccinations, oral medications to treat depression and insomnia, and supplements to help improve irritable bowel syndrome. It is an especially pleasurable moment meeting the same participants whom I have worked with in previous trials returning to Paratus Clinical Brisbane to help advance other clinical studies after receiving positive feedback.

## Where do you see Paratus Clinical heading in the next 2-5 years?

Paratus Clinical Research has grown exponentially since I first started my position as a sub-investigator. My hope and vision is to see the success of the company keep growing in the next two to five years alongside an increasing interest from the public whom have graciously volunteered their time to be part of something greater.
